WORK EXPERIENCE

Sony Corporation | Software Engineer | Bengaluru *Aug 2022 – Apr 2024*

- Built Python/SQL ETL pipelines for mixed CSV/JSON sources and added automated validation checks, improving data quality and reducing downstream rework.
- Automated AWS pipelines and Power BI refreshes for usage/engagement metrics, cutting manual reporting effort by ~15%.
- Integrated GitLab CI/CD with Jira and added Python/shell linters, reducing manual task handling by ~20% and catching issues earlier.
- Partnered with product/finance/engineering to iterate on KPIs and delivered executive Power BI dashboards, reducing feedback cycles by ~20%.
- Designed a GitLab Wiki documentation automation dashboard, reducing manual effort by ~30% and earning 3rd place in Sony's "First Challenge."

LMARKS Automation | Software Intern | Bengaluru *Feb 2022 – May 2022*

- Updated the company website by implementing feature changes and fixing bugs based on testing, improving reliability and reducing post-release regressions.
- Implemented Python integrations for IoT garage/curtain devices and tested device workflows, catching failures early and preventing malfunctions.

PROJECTS

AI Multi-Agent System for Short-Selling Prediction *Jan 2026*

- Developed a LangGraph multi-agent system (Analyst/Model/Risk) to rank U.S. equity short-sell candidates, producing actionable recommendations.
- Processed 5+ GB financial data using Python/Pandas with HDFS on a Vultr cluster to scale ingestion and feature engineering.
- Tracked experiments in MLflow (0.64 AUC, 0.45 F1) and defined a Streamlit + Qdrant dashboard to validate results and make outputs explainable.

Scalable Big Data Analytics using Hadoop, Spark, NLP *May 2025*

- Prepared a PySpark pipeline in Databricks integrated with Hadoop storage to ingest and transform 3M+ unstructured reviews at scale.
- Trained TF-IDF classifiers and used SHAP + error analysis to diagnose edge-case failures and identify key sentiment drivers.
- Created Power BI dashboards for genre/time trends and explored GenAI/RAG approaches (vector DBs, LLM fine-tuning concepts) to deepen text analysis.

Osteoporosis Risk Prediction using Statistical and Machine Learning Methods *Jan 2025*

- Cleaned and preprocessed 1M+ patient records in Python/R to create model-ready features for hypothesis testing and prediction.
- Trained Random Forest, Logistic Regression models, achieving ~83% accuracy.
- Performed EDA to surface key risk factors (age, nutrition, activity) and summarized findings via dashboards under Prof. Jianzhen Liu.

SKILLS & CERTIFICATIONS

Certifications: Microsoft Azure Data Scientist; AWS Cloud Practitioner; Snowflake Data Warehousing; Databricks Fundamentals; Cybersecurity (Univ. of Maryland)
Programming: Python, R, SQL, C++, Scala, PySpark, Shell
Data/Cloud: AWS, Azure, Terraform, Docker, Kubernetes, Hadoop, Snowflake, Databricks, GCP
Analytics/ML & Tools: Power BI, Tableau, MLflow, FastAPI, PyTorch, TensorFlow, Git/GitLab, Jira, YAML, Excel
Others: Generative AI, Delta Lake, Data Architecture & Pipelines, Data Visualization, Machine Learning Algorithms, Azure Synapse, Azure Databricks, Prompt Engineering, A/B Testing

EDUCATION

University at Buffalo – State University of New York Buffalo, NY
Master of Science in Data Science *Aug 2024 – Dec 2025*

B.M.S. College of Engineering Bengaluru, KA
Bachelor of Technology in Computer Science and Engineering *Jul 2018 – May 2022*
